

YOGIRAJ TAWDE

Senior Backend Engineer | Distributed Systems, APIs & Cloud Architecture

Berlin, Germany | +49 155 10368399 | ld.yogiraj@gmail.com | linkedin.com/in/yogirajt

PROFILE

Senior Backend Engineer with 8+ years of experience designing scalable APIs, distributed systems, event-driven microservices, and high-performance data-intensive applications. Specialized in TypeScript, Node.js, NestJS, PostgreSQL, RabbitMQ, Redis, and cloud infrastructure, with a track record of leading architecture decisions, modernizing legacy systems, and shipping measurable business impact — from €100K–€200K in annual impact to a \$1M ARR product line.

TECHNICAL SKILLS

Backend & Architecture: TypeScript, Node.js, NestJS, Express, REST, Microservices, Distributed Systems, Event-Driven Architecture

Messaging & Async: RabbitMQ, GCP Pub/Sub, AWS SNS/SQS, WebSockets

Databases & Performance: PostgreSQL, MySQL, MongoDB, Redis, MariaDB, JPA, Query Optimization, Caching

Cloud & Infrastructure: AWS (Lambda, S3, API Gateway, Athena), GCP, Docker, Docker Swarm, Kubernetes, Helm Charts, GitLab CI/CD, Jenkins

Frontend: React, Next.js, Redux

Other Languages: Java, PHP, Golang, SQL, mTLS, Banking APIs, Stripe

Core Strengths: Distributed systems & microservices migration · Event-driven architecture at scale · Database performance & query optimization · Payments & financial systems integration · Technical leadership & mentoring

PROFESSIONAL EXPERIENCE

Senior Software Engineer

Apr 2026 – Present

Autohaus Royal GmbH, Berlin | Stack: NestJS, TypeScript, PostgreSQL, RabbitMQ, MongoDB, Redis, Docker Swarm

- Lead backend architecture and technical delivery for a 3-engineer Vehicle Procurement team, acting as the key technical authority for APIs, backend services, and event-driven systems.
- Designed and built a production RabbitMQ framework used by 8 services and 15+ queues, processing thousands of events/second via declarative configuration, JSON Schema validation, and generated TypeScript types.
- Redesigned vehicle ingestion, auction, filtering, and rating workflows, increasing purchasing productivity ~4x and cutting evaluation time from 4–5 minutes to under 1 minute.
- Reduced daily support tickets from ~10–20 to 2–3 and cleared a backlog of unacknowledged RabbitMQ events by improving system reliability and observability.
- Conduct technical interviews, review code, and mentor engineers — including guiding low/no-code team members integrating AI workflows with backend services.

Software Engineer

Aug 2023 – Mar 2026

Autohaus Royal GmbH, Berlin | Stack: NestJS, React/Next.js, TypeScript, PostgreSQL, RabbitMQ, MongoDB, Redis, Docker Swarm, MySQL, PHP, Golang

- Led the phased migration of a legacy monolith to NestJS microservices using the Strangler Fig pattern, RabbitMQ-based event communication, and a database-per-service architecture.
- Built a high-throughput ingestion pipeline handling peak loads of ~30 vehicle records/second (~1MB each) using parallel processing and asynchronous workflows.
- Independently identified and delivered product improvements with an estimated annual business impact of €100K–€200K.
- Re-architected vehicle data access, cutting query response times from 40+ seconds to under 4s across 1m+ vehicle records.

Full-Stack Engineer

Apr 2022 – Mar 2023

Morressier GmbH, Remote | Stack: Node.js, Express, MongoDB, React/Next.js, Stripe, GCP Pub/Sub, Helm Charts, Kubernetes

- Co-architected and built a Proceedings Management product generating ~\$1M ARR — roughly one-third of total company ARR.

- Designed scientific publishing workflows used by organizations including IOP Publishing, ASCE, SPIE, AAAS, and SAE International.
- Built a Citation Analysis service aggregating multi-source data to detect potential citation manipulation, duplicate/related citations, and excessive self-citation.
- Migrated a legacy API gateway monolith into domain-focused microservices (Abstract, Event, Proceedings Management) using the Strangler Fig pattern.
- Resolved N+1 query problems and refactored legacy systems, achieving order-of-magnitude performance improvements in key workflows.
- Built Stripe payment integrations and backend services for peer-review history, ratings, and scientific paper workflows.

Full-Stack Developer

Feb 2021 – Mar 2022

Finoux Solutions Pvt. Ltd., Mumbai | Stack: React, Node.js, mTLS, PostgreSQL, Banking APIs

- Designed and built a private payment gateway integrating APIs from three major banks to execute real-money transfers totaling millions of USD/day, with automated reconciliation for delayed or failed responses.
- Integrated secure banking APIs using mutual TLS (mTLS) with certificate-based client/server authentication.
- Contributed to an internal platform intended to replace a third-party system with a ~\$1M annual subscription cost, reducing dependency on external payment infrastructure.
- Developed internal financial systems for DSP Mutual Fund, contributing to modernization of investment-fund management and payment workflows.
- Built a metadata-driven React framework generating forms, CRUD operations, tables, and validation from JSON configuration — cutting form development time from ~1 day to ~2 hours.
- Mentored three engineers on React, backend development, and database transaction concepts.

Software Engineer

Nov 2019 – Feb 2021

Neosoft Technologies, Mumbai | Stack: Java, JPA, MySQL, AWS SNS/SQS, AWS API Gateway, AWS S3, AWS Lambda, WebSockets, Redis, React

- Delivered end-to-end software for a global workplace analytics platform processing data from ~35,000 IoT sensors across five continents for enterprise customers including PwC, WTW, Rolls-Royce, and Mastercard.
- Built a COVID-era office booking and space-assignment platform on AWS Lambda, API Gateway, S3, and Athena, incorporating social-distancing constraints.
- Improved MySQL/JPA query performance from ~10–15s to under 500ms by eliminating N+1 access patterns, writing optimized custom queries, and introducing Redis caching; eliminated recurring memory failures on large-dataset retrieval.
- Designed real-time WebSocket workflows and event-driven caching for live sensor tracking, occupancy detection, and complex business rules.
- Optimized historical analytics queries on datasets approaching 1 billion rows/year, reducing AWS Athena query times from 1+ minute to ~8–9 seconds via partitioning and application-level aggregation.

EARLIER EXPERIENCE

Web Developer — Legaldocs RSE, Navi Mumbai

Sep 2018 – Nov 2019

Legal-tech CRM, automation tooling and Chrome extensions. Co-built the Ezo billing/accounting app — 40K+ downloads in 5 months.

Web Developer — Ahsan Alliance, Mumbai

Jan 2018 – Aug 2018

Sports social platform with live chat and stats for 150+ sports; improved MariaDB scalability.

Web Dev Intern — Fierydevs, Thane

Oct 2017 – Jan 2018

Responsive web interfaces and survey/form-generation tooling.

LANGUAGES

English — Professional Working Proficiency | German — A2 | Hindi — Native | Marathi — Native

EDUCATION

M.S. Clinical Research & Regulatory Affairs — Sikkim Manipal University (2010–2012)

Bachelor of Pharmacy — University of Mumbai (2006–2010)

Web Development Training — Itvedant Education Pvt. Ltd. (2017–2018)
